

PROVOCATIONS

I wonder what we can see in this picture? - This is a picture of some coral on a coral reef. There are a range of different corals here. Coral reefs can be found in the sea, so the blue around the reef is the water. Although they look like plants, corals are actually animals, and coral reefs are made up of thousands of animals! The biggest coral reef in the world is the Great Barrier Reef in Australia.

PROVOCATIONS

I wonder what we can see in this picture? - This is a picture of a dolphin swimming over a coral reef. All sorts of animals that live in the sea use and need coral reefs, including turtles, fish, crabs, sharks, sea snakes and seahorses. Coral reefs are good places for young animals to find something to eat because there are lots of plants and animals living on a reef. They are also good places to hide from predators (other animals that might catch and eat them).

PROVOCATIONS

I wonder what we can see in this picture? - This is a picture of a coral reef from an airplane. Some coral reefs can even be seen from space!

I wonder what colours we can see?

I wonder what shapes we can see? - Can you see the heart?!

PROVOCATIONS

I wonder what we can see in this picture? - This is a picture of a person scuba diving at a coral reef. Lots of people love coral reefs because of all the colours and the animals they see. Scuba divers need to take air to breathe in tanks on their backs. Animals in the sea breathe in different ways - some animals (like fish and sharks) use gills, while other animals (like turtles, whales and dolphins) have to swim to the surface and stick their heads out occasionally to breathe.
