

Dear Mayor,

As a local solar panel installer, I believe solar energy is the perfect solution for our town. The sun shines every day, so we'll have unlimited free electricity. It's completely safe and doesn't pollute our air or water. Plus, solar panels last for decades with almost no maintenance. Sure, it might be a bit pricey to set up but think of all the money we'll save on electricity bills.

Let's turn our rooftops into power stations!

Sincerely,
Sunny Sam

Solar

Dear Mayor,

I'm writing to express my concerns about the proposed wind farm. As a bird enthusiast, I'm worried about the thousands of birds these giant turbines will kill every day! Not to mention the constant noise pollution for nearby residents. What happens when there's no wind? We'll be left in the dark! Wind energy might be clean, but it's just not reliable enough to power our whole town.

Concerned citizen,
Windy Wendy

Wind

Dear Mayor,

As a nuclear engineer, I want to clarify some misconceptions about nuclear power. Modern nuclear plants are extremely safe and produce no carbon emissions. They can easily power all our homes and businesses 24/7, unlike solar or wind. While the initial cost is high, nuclear energy is very cost-effective in the long run. It's the most reliable and efficient energy source we have. Don't let fear stop us from embracing this amazing technology!

Nuclear

Dear Mayor,

Our town has a perfect opportunity with the nearby river. Hydroelectric dams provide clean, renewable energy and can even prevent floods. It's a win-win situation. The dam will create jobs and attract tourists. Plus, once it's built, the electricity will be cheap and reliable. It's the best way to power our growing community while protecting the environment.

Sincerely,
River Ranger

Hydro

Dear Mayor,

As the manager of the local coal plant, I must speak up for this reliable energy source. Coal is abundant and inexpensive. We've been using it for centuries, and it's always kept the lights on. Sure, there are some environmental concerns, but new "clean coal" technology can remove harmful materials before they reach the environment. Coal might not be trendy, but it's the backbone of our energy system. Let's not abandon a proven solution for unproven alternatives.

Yours truly,
Cole Miner
