

Fibre Mix and Match

Wool - Great for jumpers, socks, hats and scarves, as it is super warm!

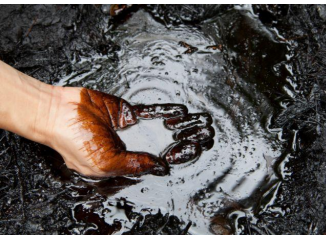

Silk - This is a bit of a fancy fabric as it takes a lot of effort to make. But it is lovely and lightweight with a bit of a shine.

Cotton - This is a good fabric for everyday wear, and many of our clothes contain cotton.

Bamboo - This can be made into a lovely soft fabric that is good for everyday wear.

Polyester, nylon and acrylic - did you know that these fibres are actually types of plastic? This material is processed into plastic, which can be turned into clothes. What is plastic made from?

Hessian - This is a pretty rough fabric, and many people wouldn't choose to wear it as it would be itchy and uncomfortable.
