

Make Your Own Mobile Phone

Make Your Own Mobile Phone

Instructions for Assembly

Step 1. Cut along the dotted lines making sure to keep the phone parts next to their labels so you remember which label belongs to each part of the phone.

Step 2. Place the Battery onto the Back Cover in the space labelled with a 1.

Step 3. Place the large L shaped circuit board around the battery on the back cover. The smaller edge of the L shaped circuit board should sit along the bottom of the phone in the area marked with a 2. The longer end will sit along the bottom left-hand side of the phone.

Step 4. Place the small L shaped circuit board over the larger circuit board so that the longest end sits at the bottom of the phone and the shorter end is running up the left-hand side.

Step 5. Place the Camera at the top of the phone in the area marked with a 3.

Step 6. Place the SIM Card Holder on the top left-hand side of the phone in the area marked with a 4.

Step 7. Put the Metal Protective Cover over the top of the Battery.

Step 8. Place the Protective Inside Cover over the phone.

Step 9. Put the Front Case/Screen over the phone.

Well done. You have just built a phone!
